DETAILED ACTION

 This Office Action is responsive to the Amendment filed on 06/25/09. Accordingly, claims 1, 2, 6-15 and 17-27 are currently pending; and claims 3-5 and 16 are canceled.

REASONS FOR ALLOWANCE

- Claims 1, 2, 6-15 and 17-27 are allowed.
- 3. The following is an examiner's statement of reasons for allowance:

-Regarding independent claim 1, none of prior art of record teaches or suggests a method as claimed. Kadous et al (7,167,684), previously-cited, teaches the method except failing to teach that the method comprises procedure of distributing elements of a received content across one or more of the antenna(s) and tone(s) to introduce full-order transmit diversity by cyclically dispersing elements of the received content across Mt transmit antennas, and a number (N) of multicarrier tones for each of a plurality of Rayleigh fading channel taps (L), wherein the cyclical dispersion of the elements of the received content provides full-order transmit diversity according to Mt*Mr*L, where Mr is the number of receive antennas, wherein the cyclic dispersion is a function of delay spread. In Kadous et al method, the cyclic dispersion is based on a channel impulse response matrix. In Kadous et al. a cyclic prefix generator is used to add cyclic prefix by repeating a portion of each OFDM symbol to form a corresponding transmission symbol at each transmit antenna in order to ensure that the transmission symbol retains it orthogonal properties in the presence of multipath delay spread. It would not have been obvious for one skilled in the art to implement Kadous et al in view of other prior art for leading the implementation to the claimed invention.

It would not have been obvious for one skilled in the art to implement Kadous et al in view of other prior art for leading the implementation to the claimed invention.

-Regarding independent claim 23, none of prior art of record teaches or suggests a system as claimed. Kadous et al teaches the system except failing to teach that the system comprises a diversity agent of distributing elements of a received content across one or more of the antenna(s) and tone(s) to introduce full-order transmit diversity by cyclically dispersing elements of the received content across Mt transmit antennas, and a number (N) of multicarrier tones for each of a plurality of Rayleigh fading channel taps (L), wherein the cyclical dispersion of the elements of the received content provides full-order transmit diversity, wherein the cyclic dispersion is a function of delay spread. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
